Fund manager's report#

Volatility (V2X Index) remained above the lower corner of the Volatility filter (>18%) for most part of the period between October 19th and November 16th, 2018. We witnessed an increase during the last week of October due to trade war turmoil with a max closing value of 23.7391% on Friday October 26th. The low exposure (max leverage 1.5) combined with efficient hedging strategies permitted the fund to cope with the raising volatility. The restructured positions from the beginning of October are now expired on November 16th allowing the Fund to implement the full strategy in case of a stable volatility environment between 18%-22%. The DJ Eurostoxx50 Index (SX5E) dropped -0.937%, in the period between October 19th and November 16th, with its YTD performance which lined up at -9.224%.
