The Sub-Fund is exposed to the Risks relating to investing in units of UCI/UCITS: Some UCI/UCITS may have recourse to leverage effects either by the usage of

Financial Derivative Instruments or by the usage of lending. The usage of leverage effects increases the volatility of the price of these UCI/UCITS and therefore the risk of the loss of capital. Most of these UCI/UCITS also stipulate the option of temporarily suspending redemption under specific circumstances of an exceptional nature. Investments made in the units/shares of UCI/UCITS may accordingly present a liquidity risk which is higher than investing directly in a portfolio of transferable securities. Investing in units/shares of UCI/UCITS may involve a duplication of certain costs in the sense that in addition to the costs deducted at the level of the sub-Fund, the investor is subject to a portion of the costs deducted at the level of the UCI/UCITS in which the sub-Fund is invested.
